## Omak Airport Hangar Area Expansion

Planning and design for the Omak Airport Hangar Area Expansion were completed in July 2025 with support from County .09 funding. This work helped elevate the project during the County's prioritization process, identifying it as regionally significant and positioning it for construction funding through Federal FAA dollars— an opportunity that may not have been available to pursue otherwise.

The project team is now assembling the FAA funding package and preparing construction bid documents, with the goal of putting the project out to bid and beginning construction in 2026. While the project does not leverage additional matching funds, it will be supported by an estimated \$700,000 in FAA entitlement funding that would have otherwise been directed toward other airport maintenance or improvement needs.

The City anticipates applying through the County's prioritization process again as the project continues to move forward.
